

Regeneron

A treatment option to help prevent a hospital stay for those recently diagnosed with COVID-19

If you or someone you know is coping at home with a recent COVID-19 diagnosis, but have a condition that increases the possibility of a hospital stay, there is a treatment available called Regeneron. For patients at high risk of severe disease from COVID-19, Regeneron lowers the likelihood of a hospital stay by up to 70% and is available at Valley Medical Center's Emergency Department. Most people have no major side effects from this medication.

Regeneron treatment is for those who:

- Have been diagnosed with COVID-19 in the last 10 days
- Are older than age 12 and weigh more than 90 pounds

AND who have one or more of the following conditions:

- Diabetes
- Chronic kidney disease
- Takes an immune-suppressing medication
- High blood pressure
- Heart problems
- Chronic lung disease
- Sickle cell disease
- Many chronic medical conditions
- A chronic mental developmental problem
- Pregnant
- Overweight
- Age 65+

If you think Regeneron may be right for you or someone you care about, talk with your primary care provider or visit a Valley **Urgent Care clinic** near you. Regeneron treatment could help avoid a hospital stay, *and might even save a life.*
