Valley Medical Center (Renton)

Organ Donation Dashboard

Key Donation	Outcomes
--------------	----------

Overall Conversion Rate organ donors / potential organ donors

Brain Dead Conversion Rate brain dead organ donors / potential brain dead organ donors

DCD Conversion Rate DCD organ donors / potential DCD organ donors

Making the Referral

Timely Organ Referral Rate timely vented organ referrals / all required organ referrals

Preserving the Option

Total Early Extubation Rate (missed referrals + extubated while following) / all referrals

patient terminally extubated prior to organ referral being made Missed Referral

Referred After Cardiac Arrest Withdrawal of care discussion and/or neuro trigger met but patient was not referred until after patient expired on vent (patient

died without WDLS). Late, previously vented referral.

patient terminally extubated after organ referral but prior to donation evaluation being completed **Extubated While Following**

Missed Opportunity vented patient with donation potential was not referred or was terminally extubated prior to donation process completion resulting

in inability to move forward with donation

Initiating Donation Conversations

Collaborative Request Rate planned family conversation in collaboration with the OPO / all family conversations

Honoring Donor Decisions

registered organ donors / all registered potential organ donors **Registered Conversion Rate**

Donor Registry Opposition Rate registered potential organ donors whose decision to donate was not honored / all registered potential organ donors
