

# Lung Cancer Screening Could Save Your Life

Screening is key to early detection—if lung cancer is found at an earlier stage, it is more likely to be successfully treated.

Who is a good candidate for lung cancer screening?

Patients who meet the three criteria below are considered at “high risk” for developing lung cancer and an annual low-dose CT screening is recommended:

50 – 80 years of age

20 pack-year history of smoking  
(this means 1 pack a day for 20 years,  
2 packs a day for 10 years, etc.)

Currently smokes OR has quit  
within the last 15 years

Think you may qualify?

Talk to your primary care provider about referring you for lung cancer screening.

Not insured?

Financial assistance for lung cancer screening is available through a grant from the Whedon Cancer Detection Foundation. For more information, please call **425.690.3501**.
