Parents: Help Your Child Stay Healthy for Life

When your child becomes very ill or hurt, it's natural to seek medical care. Keep in mind that preventive care is just as important to your child's health and well-being. Take an active role in managing your child's health to make sure they receive well child exams, regular screenings and immunizations. Choose your child's primary care provider early, know about your child's health needs and keep exact records of your child's health history.

Partnering in Your Child's Health

Your best resource in managing your child's health is a primary care physician. Regular well child check-ups let your doctor assess your child's development, screen for possible health concerns, advise you on child rearing and healthy lifestyle practices and give immunizations to protect your child from serious diseases. Your doctor will remind you when to bring your child in for certain immunizations and screenings.

VALLEY
MEDICAL CENTER

No one knows your child better than you. Give your doctor your child's health history, and talk about any signs of illness or any development issues your child may show. Ask questions and make sure you understand what your doctor tells you about your child's care, immunizations, recommended testing and prescription medicine.

How to Find a Primary Care Provider

Valley Medical Center manages a neighborhood network of primary care clinics, staffed with family practitioners. Use "Find a Doctor" on valleymed.org to help match your child with a provider that best fits your needs.

Urgent Care—When the Unexpected Happens

For times when you can't wait for a regularly scheduled appointment, Valley Medical Center's urgent care clinics offer walk-in appointments, telehealth video visits and after-hours care for injuries, illness and other clinic services when the issue is not life threatening and emergency room care is not needed. Urgent care is also less expensive than the ER, with shorter wait times. Avoid waiting in the clinic and get in line online at an urgent care near you at valleymed.org/wait-times.

Recommended Guidelines

Your child's preventive healthcare includes immunizations, screenings for development, nutrition and behavior conditions, as well as a review of risks for diseases and conditions. Your doctor will also give advice for keeping your child safe and nurtured as they grow. If your child will be in competitive sports, let your doctor know at the yearly well child check-up, so they can do any needed testing and complete forms you may need.

HELP YOUR CHILD MAINTAIN GOOD HEALTH

Your Child's Preventive Health Checklist

		0 – 24 Months	2 – 6 Years	7 – 10 Years	11 – 21 Years
